EQUIPMENT SHUT DOWN ADVICE

Because your sound and projection equipment may have been on for years with a regular restart, there is a chance that parts may fail during the restart. Especially electronic power supplies of projectors and different servers that can be sensitive to this.

Projectors and servers use batteries to insure the storage of the settings. In order to charge these batteries and keep your installation running well, we advise to turn on the servers and projectors once a week for one hour.

If you do choose to switch off the equipment, we recommend the following:

Projectors:

- Switch off Barco projectors via the switch itself.
- If possible, keep Christie projectors in standby and not completely voltage free.
- NEC projectors in standby and not completely voltage free.
- **Do not turn off the Sony SRX-R320.**
- Switch off Sony SRX-R515 projectors via the switch itself once the server has been shut down via the interface (see here under).

Servers:

- Disable Doremi servers via the software (menu / log off / shutdown)
- Dolby DSS servers via the power button located above the USB connections under the front plate. This is a small hole where you can insert a toothpick.
- All integrated media servers such as for example Dolby IMS series, Barco ICMP switch off together with the projector.
- Sony SRX-320: **Please do not turn off LMT-300 server**
- Sony SRX-R515: shutdown server via the menu and then choose shutdown.
Audio:

- If the audio rack is already turned off every night, you can continue to do this in a similar way. If this is not the case, you can better leave the audio processors on. The amplifiers can then be switched off one by one using the button.
- Please leave any existing Q-sys systems on.

TMS Servers:

- All central servers, such as the Orchestra library, Ymagis, NAS and content delivery server (EclairBox), should remain connected to a power source and powered on without interruption, whenever possible. Among other things, these guarantee our remote access to assist should you encounter any problems. If you must turn them off, please contact your technical support team to help guide you in doing so safely. Find your technical contact here: https://cinemanext.com/contact

Digital signage:

- switch off all display by using the remote

UPS:

- If power breakers are turned off please, turn off your UPS by pressing 5s the power button

If you must turn them off, please contact your local technical support team to help guide you in doing so safely.

During the reboot it is important that you do this in phases to avoid large peak voltages. For example, first start up the projector and then the server and finally the audio rack. It is also preferable to start the equipment in phases every week in order not to be surprised and to leave it on for at least 2 hours per week so that all batteries can recharge sufficiently.
